Education

Bachelor of Fine Arts — Digital Game Design & Development

Long Island University — Expected May 2027

GPA: 3.9 / 4.0

Work Experience

Lead Unity Developer (Intern)

[Cubilete Cup](#)

June 2026 – Present

- Engineered core frontend UI systems and application state logic in Unity, ensuring smooth user workflows and seamless integration with backend APIs.
- Implemented and supporting multiplayer networking systems using Photon Fusion
- Designed and tested CI/CD deployment workflows supporting weekly production deployments
- Ensured iOS and Android production builds were properly deployed
- Coordinated 3–6 player multiplayer testing sessions and release validation efforts

Founder & Lead Programmer

Tritium Softworks

May 2025 - Present

- Leading development of [Perihelion](#), a rocket engineering simulation game built in Unity
 - Architected and executed a major refactor of the core simulation architecture, decoupling gameplay logic from physics loops to improve code maintainability and scalability for future feature integration
 - Implementing 5 distinct gameplay sub-systems for the rocket design, testing, and manufacturing workflows
 - Managing a team of 3 developers, project architecture, development planning, and technical direction
 - Published and maintained a Steam storefront for Perihelion.
-

Projects

Hephaestus Flight Computer — Sole Developer

C++, Arduino, I2C, Embedded Systems, Python

March 2026 - Present

- Developed a real-time sensor processing pipeline achieving a 60Hz refresh rate for continuous data acquisition
- Built Python tooling to ingest recorded serial logs, convert telemetry into structured CSV data, and support post-flight analysis

Personal Checklist — Sole Developer

C#, WinForms, Docker, MariaDB

February 2026

- Developed a desktop task management application using C# and WinForms
 - Implemented persistent storage with MariaDB in a Docker container
-

Skills

Languages: C#, C++, Python, JavaScript, HTML/CSS

Technologies: Unity, Git, GitHub Actions, CI/CD, Photon Fusion Networking, .NET, Docker, Linux, MariaDB

Tools: Blender, Maya, Figma, Adobe Suite, JetBrains Suite
